INDEX

TOPICS COVERED

- Planning
- Developing
- Testing
- Documenting

Presented by: Daniele D’Alonzo, Sara Inzerillo and Chrision Wynaar

PLANNING

ORGANIZATION OF THE PROJECT

74921 59300 4 18863 70782 0

PLANNING THE DEVELOPMENT OF THE PLATFROM

- brainstorming
- decided what technologies to use
- focused on user requirements
- assigned tasks

DEVELOPING

BACKEND

Python 3.12, FastAPI, Apache Kafka, PostgreSQL

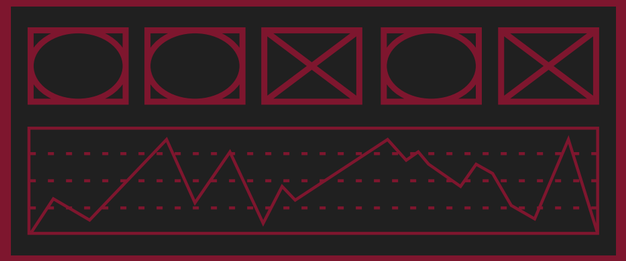
FRONTEND

React 18, Vite, Material UI, Tailwind CSS

DEVOPS

Compose, Nginx, Multi-stage builds

TESTING THE SYSTEM AND CHECKING IF THE USER STORIES ARE SATISFIED



First of all we cross checked each other’s work.

We implemented system-wide health checks to monitor the status of the microservices in real-time

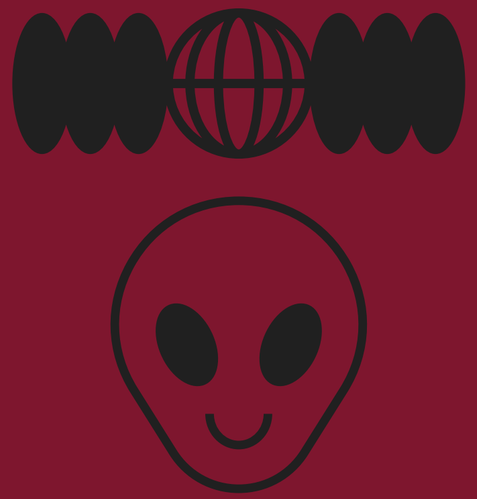
We verified whether all requirements were satisfied

We checked coherence with the user stories

We checked the correctness of the interaction between out container and the simulator

DOCUMENTING

We put together the detailed manual of the system covering all the technical specifications.



We documented the infrastructure and described all the endpoints.

We indicated the user stories and the connection to the microservices that satisfy them to ensure maintainability of the platform.
